# 6 Reasons to Make Homeopathy Your Medicine

Ever been faced with a skeptical friend or family member who can’t understand why you would choose to treat your family with homeopathy rather than conventional medicine? I’ve been thinking about some of the top reasons why I made the choice to raise my family with homeopathy.

Keep this list handy for the next time you want a little encouragement or want to succinctly explain the benefits of homeopathy to others.

## It’s Cost-Effective

There’s a reason why homeopathy is the medicine of choice in countries like India, Cuba, South America and Europe. It packs quite a punch for the money. Once you have a bit of homeopathic knowledge under your belt, you can treat most ailments at home with your remedy kit and avoid paying co-pays. If you own a kit, the remedies are as low as $2.50 each and will last decades. Feel free to **contact us** if you’re interested in a household kit.

## It’s Gentle

What medications do you know of that are safe for everyone including newborns, pregnant women, and the elderly? Rest assured that as long as they are used correctly, homeopathic remedies pose no danger to any of these groups.

It is gentle enough for your baby but also powerful enough to act deeply to fix even chronic health problems.

## There Are No Interactions

No matter what medications you take or procedures you undergo, homeopathy causes no negative interactions when used concomitantly. It is particularly beneficial to use when facing an **upcoming surgery**. Fortunately, many major medical centers are beginning to realize the benefit of homeopathy. In my home town of Buffalo, New York, our flagship hospital uses homeopathy in the emergency room.

## Homeopathy Considers the Whole Person

If you consult with a homeopath, you will probably be surprised at the amount of detailed questions she asks. You might wonder why it matters, for example, whether you’re typically thirsty or not. Homeopathy takes the totality of the individual into account in a way that conventional medicine has no interest in exploring.

The human body was not designed to function as separate systems of organs.

## It Offers True Health Independence

This is the reason that resonates most with me as a fiercely independent Sicilian-American. My immigrant grandmothers would never have dreamed of letting anyone tell them how to raise their children. My dream is to see a movement of mothers and curious others committed to taking back their God-given right to decide how to care for their own family.

## It *Works*

Indeed, it works on newborns, the unconscious, livestock, family pets and my father who years ago didn't know I was giving it to him in his soup. So don't let anyone tell you that it's a placebo.  And more importantly, it works much more effectively than conventional drugs.

I hope my list has inspired you to be bold, be courageous and count on homeopathy for your family. Certainly, I know how much there is to learn, but if I can do it, you can too.
