

Cathy Mahley, Houston

I have to share this: My daughter began to not feel well with a fever and extreme tiredness. She went to lie down and looked real pale and threw up. I gave her Nux vomica, but there was no change. Joette's newsletter with info on Gelsemium had just come. I read it and the symptoms matched, so I gave Gelsemium to her. In 10 – 15 minutes, she sat with us eating, laughing and playing. Her eyes were brighter, she was up and around and her face had color. This is incredible!
